BOWTIE™ RISK SERVICES

Introduction

*Risk Management Solutions for
Dynamic and Progressive
Industry*

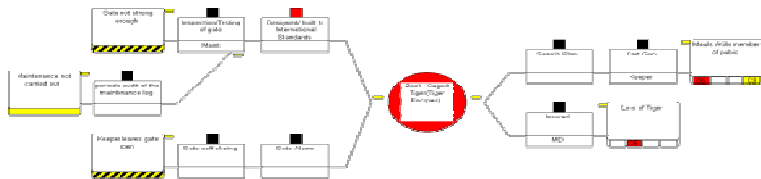

The **BowTie** has become popular as a structured method to assess risk where a qualitative approach may not be possible or desirable. The success of the diagram is that it is simple and easy for the non-specialist to understand. The idea is a simple one of combining the cause (fault tree) and the consequence (event tree). When the fault tree is drawn on the left hand side and the event tree is drawn on the right hand side with the hazard drawn as a "knot" in the middle the diagram looks a bit like a bowtie.

Bowtie analysis can be used for assessing any type of risk, e.g. environmental, safety, business, political, security, etc.

Services

ERSG can provide a full range of Bowtie services for the following processes:

- Demonstration of risk.
- Communications of the dangers and consequences.
- Creating a better understanding of specific risks.
- Maintaining a hazard register.
- Creating Organisational improvements.

ERSG USES THE FOLLOWING METHODS AND SOFTWARE

Methodology

Using the **BowTie XP™** software tool ERSG consultants are able to assist and enable clients to -

- Facilitate fast, cost effect risk assessments of an organisation's risks.
- Provide rapid storage and retrieval of risk information.
- Produce reports in format to suit specific user needs.
- Aide in communicating and understanding of an organisation's risk control frameworks to stakeholders.
- Aid in the training of staff in the risk management process and explaining their individual roles and responsibilities.
- Manage Change control process to assist in assessing the consequence of organisational or procedural changes (MOC).
- Demonstrate effective management of risk to shareholders, other stakeholders and regulators
- Enhances overall business effectiveness.
